

# The Air Raid Sirens in Kyiv

## What is Air Raid Siren?

The detection of aerial threats in Ukraine is the responsibility of the Ukrainian Air Force. They utilize various sources of information to track both potential and real threats in the sky.

Between the moment a threat is detected and the sounding of the sirens, several seconds to several minutes may elapse. The Air Force identifies the

launch location of the missile, its possible type, and the corresponding range of impact. Based on this information, the regions that may be affected are determined, and sirens are activated in those areas.
